Summary

Backend Software Developer with hands-on experience building scalable web applications using C#, ASP.NET Core, Entity Framework Core, and SQL Server. Proven track record in developing secure RESTful APIs, designing optimized databases, and translating business requirements into maintainable technical solutions. Focused on writing clean code, implementing robust security mechanisms, and solving complex problems efficiently.

Experience

InQmise Technologies India Pvt. Ltd. **07/2025 – Present**
Software Developer *Onsite*

- Develop and maintain production applications and legacy systems using C#, ASP.NET MVC, and ASP.NET Core Web API, translating business requirements into database designs, application features, and third-party integrations.
- Implemented secure authentication and authorization mechanisms using JWT and Role-Based Access Control (RBAC) across modular REST Api's endpoints.
- Leveraged Git and GitHub for version control and collaboration, and Postman to test REST APIs, validate responses, and troubleshoot integration issues.
- Took end-to-end ownership of 2 .NET web applications from requirement analysis through deployment, coordinating directly with clients across 3+ delivery cycles.

Technical Skills

Languages:C++, C#, JavaScript
Backend: ASP.NET Core, MVC, Entity framework core
Frontend: React.js, Tailwind CSS, Responsive Web Design
Database: SQL Server, MongoDB
Developer Tools: GitHub, Postman, SSMS, VS, VS Code, Workbench,Heidi SQL, Sendgrid,
Computer Fundamentals: Data structures and algorithm, DBMS, OOPS, Operating System (OS)
Certifications: **Algorithms(Basic)**, **SQL(Basic)**
Coding Profiles:**Leetcode(1712)**, **Coding Ninjas (Specialist)**, **HackerRank(5 Star)**, **GFG(300+ coding score)**

Projects

Corrugated Box ERP | *Tech Used : ASP.NET Core,EF Core,Angular,SQL Server,Send-grid*

- Architected and developed an end-to-end manufacturing ERP system, unifying customer management, quoting, sales orders, inventory tracking, and job card production and reporting — reducing manual data entry by 40-60% across the workflow.
- Implemented Clean Architecture using MediatR (CQRS pattern) in ASP.NET Core to decouple API controllers from domain business logic, significantly improving testability and code maintainability.
- Engineered secure RESTful APIs using Entity Framework Core and SQL Server, enforcing fine-grained security via JWT authentication and Role-Based Access Control (RBAC) accros 4+ roles.
- Automated transactional emails and client notifications by integrating SendGrid with backend domain events, reducing manual status communication.

Blog Publishing Platform : BlogStudio | *Tech Used : ASP.NET Core, EF Core,Angular,SQL Server*

- Developed a full stack publishing platform with Angular and ASP.NET Core Web API, enabling authors to create, edit, and publish blog posts with role-based permissions.
- Designed a 3 layer backend architecture (API → Application → Domain → Infrastructure), isolating business logic from data access and reducing cross-layer dependencies.
- Implemented JWT authentication with refresh-token rotation, token revocation, and salted PBKDF2 password hashing for secure account access.
- Built RESTful APIs with typed DTOs, FluentValidation, and consistent responses; integrating Angular reactive forms with backend validation and SQL Server persistence through Entity Framework Core.

Education

Madan Mohan Malaviya University Of Technology, Gorakhpur **10/2020 – 06/2024**
Bachelor of Technology in Electronics and Communication Engineering *CGPA 7.97*

Achievements

- **Leetcode**:Successfully solved **250+** coding questions and achieved Max rating **1712**.
- **Coding Ninjas**:Finished **150+** questions and achieved title of **specialist level**.
- Secured All India ranks **48** and college rank **second** in the CodeKaze exam conducted by coding ninjas.
- National Talent Search Examination Scholar.
